# eyemail

**IN BRIEF:** Employees who distribute inappropriate materials via email put an organization into a position of legal liability. Built on our patent pending OCULAR™ technology, EyeMail is the only email solution with the power to analyze alternate data types (.gif, .jpg, etc) and the ONLY email solution capable of REAL-TIME classification.

EyeMail combines the flexibility of user-based activity management with a simple SMTP server-based solution. Because EyeMail analyzes email content as it passes through, it invisibly deploys into your existing email infrastructure. Employing the best available solution proves due diligence on behalf of your organization.

## FEATURES AND BENEFITS

**Uses OCULAR™ Technology**
Using real-time computer vision techniques to analyze image content, EyeMail is the most sophisticated email content management solution available today.

**Black list or white list attachments**
You decide what type of attachments are necessary for day to day operations and therefore which attachments pass through the email system. Blacklist attachments that are problematic, or whitelist (only allow these types through) approved data formats. You can even allow reported receipt overrides to ensure the right data always gets through, even if it is in the wrong format.

**Reduces SMTP network congestion**
EyeMail eliminates unwanted attachments and keeps email focused on core business activities. This reduces bandwidth requirements and saves you money.

**Detect and Eliminate Pornographic Images**
Using our patent pending real-time computer vision techniques, EyeMail can analyze image and movie attachments to determine whether or not they contain pornographic content and prevent such material from circulating around the office.

**Prevent the Loss of Proprietary Information**
Prevent the leakage of proprietary information by limiting outgoing textual content. As an additional layer of protection, EyeMail can perform a *steganographic* scrambling of image content to further ensure trade secrets stay secret. Steganography is the secret embedding of information into images. EyeMail is the ONLY solution capable of protecting your organization against steganographic leakage of information.

**Remove Inappropriate Textual Content**
Manage incoming and outgoing textual email content. By allowing you to define inappropriate textual content, EyeMail ensures that the values of your organization are maintained.

## Supporting Features

- Handles all major image data types
- Prevent virus infection by removing executable attachments
- Reduce legal liabilities
- Attach corporate disclaimers and footers to all email
- Override capabilities to fetch misclassified images or stripped attachments
- Artificial Intelligence

**Minimum System Requirements**
Windows NT/2000, Linux, or Solaris
128 MB RAM
Intel/Sparc or compatible processor at
300 MHz or greater
10 MB of hard disk space for the program
500MB-2GB for the scratch area
